

## APPLICATION GUIDE

# Superwashable Paint

**0,75L**

~6m<sup>2</sup>  
for two layers

Turn your wall into  
a superwashable surface

Please read all of the instructions before applying Scribit Superwashable Paint to your wall.

### PHASE 1: Prepare your surface

The application should take 30 minutes with an additional drying time of 24 hours

#### 1 Measure your area

It is important that you apply the paint over the entire drawing area (maximum size of 2mx2m).

We've made sure that you have enough Superwashable Paint for this, however, if you wish to paint over the entire installation area, please be aware that you may need more paint.

Your installation area size

2m x 2m / (1m x 1m)  
2.25m x 2.25m / (1.13m x 1.13m)  
2.50m x 2.50m / (1.25m x 1.25m)  
2.75m x 2.75m / (1.38m x 1.38m)  
...  
4m x 4m / (2m x 2m)

#### 2 Mark your area

- Temporarily remove Scribit from your wall.
- Using masking tape, mark out the boundary of the area to be painted. For this step, we recommend using a measuring tape, a spirit level and a pencil.

**IMPORTANT:** Make sure that the area to be painted is marked out at the center of your installation area. We recommend measuring an area slightly wider than the defined drawing area.

Additional items

**A friend**  
You may need an extra hand

**Stepladder**  
To more easily reach the support heights

**Additional Tools**  
Measuring tape, a spirit level, and pencil

#### 3 Prepare the surface

- Cover and protect the area around the surface you intend to paint.
- Find and fill any holes or cracks in the surface with a regular decorators filler
- Next, use the sanding block in your kit to smooth the filled surface. The Scribit Superwashable Paint will only be as smooth as the surface it is applied to.
- Clean the surface at the end of the process.

Additional items

**Stepladder**  
To more easily reach the support heights

**Plastic sheet**  
Or an alternative material to protect your installation area

## PHASE 2: Paint application

### 4 Get ready for painting

- Shake the can well before use
- Prime the surface if necessary. This is recommended in order to achieve the best results on difficult surfaces.

**IMPORTANT:** Do not apply on surfaces that are directly exposed to sunlight and/or driving wind. Avoid use in extremely humid environments. During storage, keep well closed, away from sources of heat and direct sunlight. Do not place in cold storage.

With the can still closed, shake well for at least 1 minute.

### 5 Apply the paint over your surface

- Pour the paint into a paint tray and dip your roller into the paint.
- Don't steer too much the paint. Be abundant in the first layer.
- Wait 5 hours before applying the second layer.

**IMPORTANT:** Larger rollers can be used. We recommend a high quality foam roller. Pass the roller over the entire surface 10 times to ensure a generous, smooth and even coating.

roller sleeve

~6m<sup>2</sup> for two layers

Additional items

**Stepladder**  
For big canvases

**Painting tray**  
In order to optimally prepare your roller sleeves.

## PHASE 3: Drying time & Use

### 6 Waiting for your surface to be Scribit ready

- Wait the right amount of time between phases.
- You can clean your tools with water between the 1<sup>st</sup> and 2<sup>nd</sup> phase and at the end of the process.

**IMPORTANT:** Optimal product performance and adhesion is achieved 20 days after application. Treat the surface gently, avoiding direct impacts, abrasion, staining or cleaning, for the first 20 days after initial application.

2h  
to the touch

5h  
between layers

24h  
completely dry

48h  
ready for Scribit

20d  
Optimal product performance

Clean tools using water

### 7 Enjoy your superwashable drawing area

- You can now reinstall Scribit on your wall. Please note that Scribit will need to be recalibrated.
- Using Scribit with any set of compatible superwashable markers, you can now erase drawings from your wall by hand with a damp cloth. Water is enough, but you may wish to periodically perform a deeper maintenance cleaning using standard cleaning products (avoid bleach and other aggressive cleaning agents).

**IMPORTANT:** You can use Scribit Erasable Markers but don't use Scribit's erase function on this paint!

58 mm / 2.28 in

marker area inside Scribit

Supported diameters start from 10 to 14.5 mm / 0.39 to 0.57 in

The indicated length applies to **any other possible marker** you might use.
